

# Dyslexia, Dyscalculia, Dysgraphia

Cardinal Pediatrics  
304-599-8000

## Over 20% of people have some form of a learning difference!

- A child will succeed with the right intervention
- Requires a different instruction than used in schools today. Teachers DO NOT typically recognize signs.
- It is NOT reversing Bs and Ds
- Highly Hereditary!! There is a 50% chance family members have it also

### Where can you start?

- Goto [www.cardinalpediatrics.com](http://www.cardinalpediatrics.com) and click on the Dyslexia link on the left
- Watch the video and see if your child has the signs
- Take the screeners and see how your child does. If you are concerned, send us the results
- Put in writing to your school to test your child. If you need us to write a letter, please call!
- Start getting your child help NOW – Do not wait for your school

### What is it?

Dyslexia is a learning difference in reading.

Dysgraphia is a learning difference in writing.

Dyscalculia is a learning difference in math.

### Signs

- Delayed speech/language
- Struggles remembering letter/numbers/colors
- Frustrated and spends hours on homework
- Can't seem to follow directions
- Good at math, but not memorizing multiplication tables
- Saying "aminal" instead of "animal"

### What we do know

- Your child is average to above average intelligence
- This can be found as early as preschool – do not wait until they are beyond frustrated with school
- For children diagnosed with a Learning Disability, schools must provide an Individualized Education Plan – IEP.

### Co-Conditions

- ADHD/ADD
- Motor Control - Difficulty with handwriting or learning how to tie shoes
- Listening
- Spelling
- Writing - Trouble finding the 'right' word, Problems note taking or copying from the board
- Memory Difficulties - Trouble memorizing sight words, phone numbers, or their home address
- Spatial/Temporal Issues - Difficulties with telling time, Confusing left and right
